

HCL Link

SAP Pack

At A Glance

Success with SAP S/4HANA and SAP R/3 depends on an ability to integrate and share information with other systems. In a typical corporate setting, a single SAP system needs to integrate with a wide range of applications. These include legacy systems, applications provided by a third-party, and other SAP systems within the enterprise. The HCL Link SAP Pack is a modernized data integration solution for interfacing SAP S/4HANA and SAP R/3 with third-party applications and legacy systems. HCL Link helps enterprises solve multifaceted data integration problems between SAP and non-SAP systems. As a code-free solution, it provides the ability to connect SAP to the source or target applications of the relevant data and then processes complex data transformation and validation across a range of messaging standards and data formats, including those involving industry-specific formats.

HCL Link SAP Pack is essential for companies with mission-critical and complex integration needs for non-SAP systems. A comprehensive and easy-to-use data transformation and integration solution accelerates SAP projects that support business and compliance initiatives. HCL Link can fit across the organization with flexible deployment options in the cloud, on-prem or in hybrid environments.

HCL Link SAP Pack speeds up the development of SAP integrations with:

- Pre-built metadata importers for SAP and third-party applications as well as pre-built industry standards
- Connectivity solutions for SAP S/4HANA, SAP R/3, many non-SAP applications, databases and both on-premises and cloud technologies
- A code-free design environment to handle the most complex data integration needs

Key Features

Maximize the value of your SAP investment with this solution pack that simplifies and reduces the time to value of integration with the rest of your business systems.

Fast, Flexible Metadata Importers

Leverage the flexibility of included importers of SAP-defined data exchange formats in order to speed up the development of integrations with SAP

Broad SAP Interface Support

Exchange business information in any format with enterprise SAP S/4HANA and SAP R/3 applications.

Multiple Integration Methods

Leverage connectors to support both synchronous and asynchronous connectivity between your systems and SAP.

Key Business Benefits

High performance

Event-driven, transactional environments to ensure completion and validation of transactions in real time or batch.

Lower costs

Accelerate projects and reduce implementation costs enabling you to retire old or manual processes or interfaces that are inflexible and expensive to maintain.

Reduced maintenance effort

Save time on the maintenance of implementations by taking advantage of accessing meta-data or using pre-built standards.

Flexibility

Prepare for changing business, compliance, and application environments with the most adaptable data transformation and integration platform.
